# The IAS-AC 478 Process

Accredited entities complying with this criteria will have demonstrated that they have the personnel, organization, experience, knowledge, management procedures and commitment to assemble metal building systems in accordance with specified requirements. IAS-accredited inspection programs for metal building systems assembly operate under a documented safety and training program. An IAS -accredited inspection agency conducts jobsite inspections to verify continued compliance with this criteria.

## HOW CAN FET HELP?

In the AC-478 program, under the "General requirements", the organization seeking accreditation under this criteria must obtain the services of an IAS accredited inspection agency which is accredited for this specific discipline to conduct at a minimum an annual inspection at a selected jobsite. Farabaugh Engineering and Testing (FET AA-715) is accredited to do this assessment

Once you reach out to us we will put you in touch with our certified auditor to schedule your initial visit and answer any questions you may have about the audit process. To get started give us a call today at **412-751-4001** or complete a request form on our website at **www.FetLabs.com**

## WHY FET?

Farabaugh Engineering and Testing is a family owned and operated engineering and testing facility. We were one of the first companies offering the audit services for the AC-472 (Manufacturer). The AC-478 program is naturally the next step in the metal building process. For the past 20 years FET had been providing the testing for the materials used for metal buildings - we know metal buildings like no one else. Through step by step audit process you will see the attention to details and relationships that makes FET the best choice to do your AC-478 audit. We are also members of the MBCEA.
